

Nuclear spin precession at Larmor frequency

Larmor:

$$f_0 = \gamma B_0 / 2\pi$$

$$^1\text{H}: 42.58 \text{ MHz/T}$$

$$1.5\text{T} \rightarrow 63.9 \text{ MHz}$$

$$3\text{T} \rightarrow 127.7 \text{ MHz}$$

$$7\text{T} \rightarrow 297.7 \text{ MHz}$$

RF at f_0 tips magnetisation into transverse plane $\rightarrow$ FID signal detected by coil
